

Safety Begins With Me

Plant security is critical to your safety and the safety of your fellow associates. It also protects our clients' property. You're on the front line every day, ensuring the safety of the water and wastewater systems for the communities we serve. Your vigilance is vital.

Can you answer *yes* to these questions?

- Has a written Standard Operating Procedure been developed for conducting plant tours?
- Does your treatment facility have a visitor's log, and do you require all visitors to sign in?
- Does your treatment facility have one central point of entry?
- Are your treatment facility's gates locked and secured when they are not staffed?
- Has your Emergency Response Plan been updated to include terrorism?

**September is Security Month at CH2M HILL OMI.
Celebrate by securing your facility.**
